

Fabric Flo — App Store & Google Play Release Checklist

From UI-complete to published apps

Generated for operators · May 2026 · Not legal advice

Use this with: `docs/STORE_RELEASE.md` ,
`docs/MOBILE_RELEASE.md` , `docs/BACKEND_SETUP.md` ,
`docs/INVESTOR_NETLIFY.md` , and the in-app **Rollout guide** (`/launch-checklist`).

Share with investors (phone, any location): deploy to Netlify —

`https://YOUR-SITE.netlify.app/` (marketing) and `/app`
(product). Local `http://127.0.0.1:5173` only works on your Mac while
`npm run dev` is running.

Phase 1 — Production backend & web host (do first)

Stores require a **live Privacy Policy URL** and HTTPS for password reset.

- ☐ **Supabase production project** — run SQL migrations `001` through `009` (or paste `supabase/APPLY_ALL_MIGRATIONS.sql` from `npm run supabase:bundle`).
- ☐ **Netlify (or other host)** — connect GitHub at app.netlify.com or `npm run netlify:deploy` after `npx netlify-cli login` (see `docs/INVESTOR_NETLIFY.md`).
- ☐ **Production environment variables** on Netlify (Site configuration → Environment variables):
 - `VITE_SUPABASE_URL`
 - `VITE_SUPABASE_ANON_KEY`
 - `VITE_FABRIC_FLO_BACKEND=normalized`
 - `VITE_PUBLIC_APP_URL` — your live Netlify URL (e.g. `https://fabric-flo.netlify.app`), no trailing slash

- `VITE_SUPPORT_EMAIL` and `VITE_PRIVACY_EMAIL`
- ☐ **Redeploy** after setting env vars (Clear cache and deploy) — Vite bakes `VITE_*` at build time.
- ☐ **Supabase Auth URLs** — Site URL + Redirect URLs match your Netlify domain (`https://YOUR-SITE.netlify.app/**`).
- ☐ **Deploy web build** so these URLs work:
 - `https://YOUR_DOMAIN/` (marketing)
 - `https://YOUR_DOMAIN/app` (app)
 - `https://YOUR_DOMAIN/privacy`
 - `https://YOUR_DOMAIN/terms`
 - `https://YOUR_DOMAIN/launch` (env checklist)
- ☐ **Smoke test cloud flows** on two devices: sign in → Invite Code → crew joins → scan → shared log when online.
- ☐ Optional: deploy `delete-account` Edge Function; set `VITE_ACCOUNT_DELETE_EDGE=1` (see `docs/STORE_RELEASE.md`).

Command: `npm run verify:release`

Phase 2 — Developer accounts & business basics

- ☐ **Apple Developer Program** — \$99/year — developer.apple.com
 - ☐ **Google Play Console** — \$25 one-time — play.google.com/console
 - ☐ **Support email** monitored for store listings and users.
 - ☐ **Privacy / Terms review** — run `npm run legal:pdf` ; share `docs/Fabric_Flo_Legal_Checklist.pdf` with your attorney.
 - ☐ **Business entity, insurance, trademark** — as needed for your operation.
-

Phase 3 — Native apps (Capacitor)

The repo includes `ios/` and `android/` projects. App ID: `app.fabricflo.tracker` .

- ☐ **Mac setup:** Node 18+, **Xcode** (iOS), **Android Studio** (Android).

- ☐ Build and sync:

```
npm ci
npm run build
npm run cap:sync:full
```

- ☐ **iOS Info.plist** — camera usage: *Fabric Flo uses the camera to scan QR codes on fabric and bag labels.*
 - ☐ **Android AndroidManifest.xml** — **CAMERA** permission.
 - ☐ **App icons** — 1024×1024 PNG (Apple, no alpha); adaptive icon (Android).
 - ☐ **Version / build numbers** — bump each store submission.
 - ☐ **Signing** — Apple certificates in Xcode; Android upload keystore (back up securely).
-

Phase 4 — On-set testing (before store review)

- ☐ **TestFlight** (iOS) — internal testers with real QR codes and rental labels.
 - ☐ **Play internal testing** (Android) — same crew and flows.
 - ☐ **Offline test** — airplane mode → scan → place → online → sync completes.
 - ☐ **Rental list & log** — Download (CSV + PDF) and Upload on phone.
 - ☐ **Fabric type catalog** — rolodex from **FABRIC LIST** xlsx (`npm run fabric-catalog:import` if you update the list).
 - ☐ **Account deletion** and delete data on device.
 - ☐ **Forgot password** email (requires correct `VITE_PUBLIC_APP_URL`).
-

Phase 5 — Apple App Store Connect

- ☐ Create app — bundle ID: `app.fabricflo.tracker`
- ☐ Store listing: name, subtitle, description, keywords, category (Business or Productivity)
- ☐ **Privacy Policy URL**: `https://YOUR_DOMAIN/privacy`
- ☐ **Screenshots** — iPhone required; iPad if supporting tablets

- ☐ **App Privacy labels** — email, inventory/scans, camera for QR only; no tracking in v1
 - ☐ **Age rating** — workplace tool; typically 4+
 - ☐ **Xcode:** Archive → Upload to App Store Connect → Submit for review
 - ☐ **Reviewer notes** — demo login; camera only on Scan tab
-

Phase 6 — Google Play Console

- ☐ Create app; upload **signed App Bundle** (AAB)
 - ☐ Store listing: descriptions, graphics, feature graphic
 - ☐ **Privacy Policy URL** — same as Apple
 - ☐ **Data safety form** — match Apple disclosures (email, content, encryption, deletion)
 - ☐ **Content rating** questionnaire
 - ☐ **Testing track** → production (staged rollout recommended)
-

Phase 7 — After launch

- ☐ Monitor Supabase usage, errors, backups
 - ☐ Process updates: fix → version bump → `npm run build` → `cap sync` → resubmit
 - ☐ Periodic `npm audit` and dependency updates
 - ☐ Update Privacy Policy if you add crash analytics or new data collection
-

Quick readiness summary

Area	In repo	You still need
UI / flows	Complete (marketing / , app /app)	Final device QA
Cloud / invites	Built (migrations 001–009)	Live Supabase + Netlify env + SQL apply
Investor demo URL	<code>netlify.toml</code> + docs	Netlify site + env + redeploy

Legal pages	In-app routes	Public HTTPS URLs + counsel review
Native shells	ios/ + android/	Icons, signing, listings
Store accounts	—	Apple + Google enrollment

Helpful commands

```
npm run build
npm run cap:sync:full
npm run verify:release
npm run supabase:bundle
npm run netlify:deploy
npm run legal:pdf
npm run store:pdf
```

Fabric Flo — Film fabric & bag tracker for productions.
