

# Fabric Flo — App Store & Google Play Release Checklist

---

## From UI-complete to published apps

Generated for operators · May 2026 · Not legal advice

Use this with the detailed guides in the repo: `docs/STORE_RELEASE.md` , `docs/MOBILE_RELEASE.md` , and the in-app **Rollout guide** ( `/launch-checklist` ).

---

## Phase 1 — Production backend & web host (do first)

Stores require a **live Privacy Policy URL** and HTTPS for password reset.

- ☐ **Supabase production project** — run SQL migrations `001` through `008` in order (Supabase SQL editor).
- ☐ **Production environment variables** on your host (Netlify, Vercel, etc.):
  - `VITE_SUPABASE_URL`
  - `VITE_SUPABASE_ANON_KEY`
  - `VITE_FABRIC_FLO_BACKEND=normalized`
  - `VITE_PUBLIC_APP_URL` (e.g. `https://app.fabricflo.com` )
  - `VITE_SUPPORT_EMAIL` and `VITE_PRIVACY_EMAIL`
- ☐ **Deploy web build** ( `npm run build` ) so these URLs work:
  - `https://YOUR_DOMAIN/privacy`
  - `https://YOUR_DOMAIN/terms`
- ☐ **Smoke test cloud flows** on two devices: sign in → Invite Code → crew joins → scan → shared log when online.
- ☐ Optional: deploy `delete-account` Edge Function; set `VITE_ACCOUNT_DELETE_EDGE=1` (see `docs/STORE_RELEASE.md` ).

**Command:** `npm run verify:release`

---

## Phase 2 — Developer accounts & business basics

- ☐ **Apple Developer Program** — \$99/year — [developer.apple.com](https://developer.apple.com)
- ☐ **Google Play Console** — \$25 one-time — [play.google.com/console](https://play.google.com/console)
- ☐ **Support email** monitored for store listings and users.
- ☐ **Privacy / Terms review** — run `npm run legal:pdf` ; share `docs/Fabric_Flo_Legal_Checklist.pdf` with your attorney.
- ☐ **Business entity, insurance, trademark** — as needed for your operation.

---

## Phase 3 — Native apps (Capacitor)

The repo includes `ios/` and `android/` projects. App ID: `app.fabricflo.tracker` .

- ☐ **Mac setup:** Node 18+, **Xcode** (iOS), **Android Studio** (Android).
- ☐ Build and sync:

```
npm ci
npm run build
npm run cap:sync:full
```

- ☐ **iOS Info.plist** — camera usage: *Fabric Flo uses the camera to scan QR codes on fabric and bag labels.*
- ☐ **Android AndroidManifest.xml** — **CAMERA** permission.
- ☐ **App icons** — 1024×1024 PNG (Apple, no alpha); adaptive icon (Android).
- ☐ **Version / build numbers** — bump each store submission.
- ☐ **Signing** — Apple certificates in Xcode; Android upload keystore (back up securely).

---

## Phase 4 — On-set testing (before store review)

- ☐ **TestFlight** (iOS) — internal testers with real QR codes and rental labels.
- ☐ **Play internal testing** (Android) — same crew and flows.
- ☐ **Offline test** — airplane mode → scan → place → online → sync completes.

- ☐ **Rental list & log** — Download and Upload (CSV + PDF) on phone.
  - ☐ **Account deletion** and delete data on device.
  - ☐ **Forgot password** email (requires correct `VITE_PUBLIC_APP_URL` ).
- 

## Phase 5 — Apple App Store Connect

- ☐ Create app — bundle ID: `app.fabricflo.tracker`
  - ☐ Store listing: name, subtitle, description, keywords, category (Business or Productivity)
  - ☐ **Privacy Policy URL**: `https://YOUR_DOMAIN/privacy`
  - ☐ **Screenshots** — iPhone required; iPad if supporting tablets
  - ☐ **App Privacy labels** — email, inventory/scans, camera for QR only; no tracking in v1
  - ☐ **Age rating** — workplace tool; typically 4+
  - ☐ **Xcode**: Archive → Upload to App Store Connect → Submit for review
  - ☐ **Reviewer notes** — demo login; camera only on Scan tab
- 

## Phase 6 — Google Play Console

- ☐ Create app; upload **signed App Bundle** (AAB)
  - ☐ Store listing: descriptions, graphics, feature graphic
  - ☐ **Privacy Policy URL** — same as Apple
  - ☐ **Data safety form** — match Apple disclosures (email, content, encryption, deletion)
  - ☐ **Content rating** questionnaire
  - ☐ **Testing track** → production (staged rollout recommended)
- 

## Phase 7 — After launch

- ☐ Monitor Supabase usage, errors, backups
- ☐ Process updates: fix → version bump → `npm run build` → `cap sync` → resubmit
- ☐ Periodic `npm audit` and dependency updates

- ☐ Update Privacy Policy if you add crash analytics or new data collection

---

## Quick readiness summary

| Area            | In repo          | You still need                   |
|-----------------|------------------|----------------------------------|
| UI / flows      | Largely complete | Final device QA                  |
| Cloud / invites | Built            | Live Supabase + env + migrations |
| Legal pages     | In-app routes    | Public URLs + counsel review     |
| Native shells   | ios/ + android/  | Icons, signing, listings         |
| Store accounts  | —                | Apple + Google enrollment        |

---

## Helpful commands

```
npm run build
npm run cap:sync:full
npm run verify:release
npm run legal:pdf
npm run store:pdf
```

**Fabric Flo** — Film fabric & bag tracker for productions.
